

Strategy vs. System: Grazing for Desired Outcomes

Sponsored by
Colorado Society for
Range Management

December 2-4, 2008
Fort Collins, CO

Call for Posters

Topics:

- Historical grazing management
- Grazing management research
- Managing for wildlife habitat needs through grazing
- Managing poisonous/noxious plants through grazing
- Watershed management with grazing
- Other topics relating to grazing management and outcomes

Abstract Requirements:

- = 300 words
- Statement of objectives
- Description of methods
- Actual results
- Summary statement/conclusions
- Due by October 20, 2008

Authors notified by November 1, 2008

For meeting information, registration and hotel information:

Submit abstracts or questions by email (preferable) to:
timothy.steffens@co.usda.gov

or by mail to:

Tim Steffens
27200 Hwy 287
Springfield CO 81073

Overview

Although man has kept grazing animals throughout history, grazing management using a plan and purpose is relatively new. There are many practitioners and researchers that practice continuous or season-long grazing as well as those who believe fences, water development, and management of the timing, intensity, and distribution of grazing yield higher profits and better vegetation.

We invite poster submissions from researchers, planners and practitioners who have successfully applied and/or developed goal oriented grazing techniques, practices, or tools to successfully improve ecosystem function, financial performance, and/or family or community relations.
